

## FUSION SOFTWARE MODULE + Tablet PC Forms

FORMIC'S TABLET PC FORMS MODULE ENABLES MOBILE WORKERS TO CAPTURE INFORMATION ELECTRONICALLY AT THE FRONT-LINE AND DOWNLOAD INSTANTLY TO ENTERPRISE APPLICATIONS; THEREBY ELIMINATING THE NEED TO MANUALLY ENTER INFORMATION FROM PAPER DOCUMENTS. WITH THE TIME LAG FROM INFORMATION CAPTURE TO INFORMATION USE MASSIVELY REDUCED ORGANISATIONS ARE ABLE TO RESPOND QUICKLY TO INFORMATION ABOUT CUSTOMERS OR WORKFORCE ACTIVITIES.

Here's a quick summary of the other key benefits:

### MOBILITY AND CONVENIENCE

Because part-completed forms can be saved locally until they are ready to be submitted, the task of record keeping accommodates irregular work patterns. What's more, the forced accuracy of data entry guarantees meticulous record keeping in roles where this is a fundamental requirement.

### THE VERSATILITY AND FEEL OF PAPER

The experience of filling out a Tablet PC form is reminiscent of paper. Use the pen-like stylus to put ticks in boxes, mark an area on an image or even write freehand and the software will instantly transpose your joined-up handwriting into alphanumeric characters. You can even create a library of special words or phrases for instant, trouble-free recognition. A keypad provides an alternative method of entering data.

### FULL VALIDATION, CLEAN DATA

The business rules that decide whether a form is accepted/rejected are embedded in the Tablet PC Form - contributing to a significant increase in data accuracy and reliability. If any invalid data is entered, error messages appear encouraging the user to make the necessary corrections. At periodic intervals, the worker simply connects their tablet to the network and uploads all completed forms; sending the underlying data along with an ink version of the form to a secure location. The software will not permit invalid forms to be submitted. [CONT. >>](#)

#### BIOMETRIC SIGNATURE AUTHENTICATION

To prevent impersonators from accessing sensitive forms, the option to add biometric signature authentication provides a new level of security. The software is trained to recognise the speed, pattern and pressure applied when a user signs a form and match this to a databank of authorised user(s). If the signature goes unrecognised, the form cannot be accessed.

#### FAST, LIGHTWEIGHT INSTALLATION

Installing Tablet PC Forms could not be easier as no specialist skills are required. Simply follow the set up instructions and the software automatically loads a local cached copy of your existing form design onto the tablet's hard drive for immediate use. The speed of other applications on the tablet is not affected because the file is so lightweight. What's more, it's compatible with all tablet PC's on the market today.

#### PREREQUISITE SOFTWARE

Windows XP Tablet PC Edition.

#### MINIMUM SPECIFICATION

Intel Pentium IV 1.2 GHz processor, 512 MB of RAM, 2 GB of available hard disk space, 1024 x 768 screen resolution or higher, CD-ROM or DVD drive.

#### AT A GLANCE

- Eliminates the separate task of manually keying in data from paper records
- Permits only fully completed and accurate records to be submitted
- Versatile and convenient method of recording information
- Error messages teach the user how to correctly complete a form
- Protect against impersonators with biometric signature authentication
- Extremely quick and easy to install – no specialist skills required
- Integrates with paper and other electronic forms processing e.g. web, PDA
