

FUSION SOFTWARE MODULE +Web Forms

FUSION'S WEB FORMS MODULE ENABLES USERS TO INSTANTLY DEPLOY PAPER FORM DESIGNS TO THE WEB

Organisations intent on realising the efficiencies of electronic forms are often reluctant to dispense with paper entirely. Indeed, there are often good reasons for working with both document formats. What they need is a hybrid system capable of processing paper and electronic versions of the same form design simultaneously, while applying the same rigorous business rules to each.

Fusion's Web Forms module enables users to instantly deploy paper form designs to the web. Here's a quick summary of the key benefits: -

INSTANT DESIGN UPDATES

The base form design is synchronised live with its Web Form equivalent so that design changes are immediately reflected in the published Web Form. Moreover, retrieval of respondents' data from completed Web Forms is instantaneous, providing an up-to-date picture of the incoming results as they are received.

FAST LOADING WEB PAGES

The method by which Web Forms are created results in an extremely small file and so they are very quick to download, reducing Internet time and cost.

BETTER USER EXPERIENCE

Web Forms are very easy to complete, assisted by prompts for correct completion and comprehensive feedback is given should the user attempt to submit invalid data. Fast movement around the form is made possible using the [enter] or [tab] keys.

ENHANCED VALIDATION ON DATA ENTRY

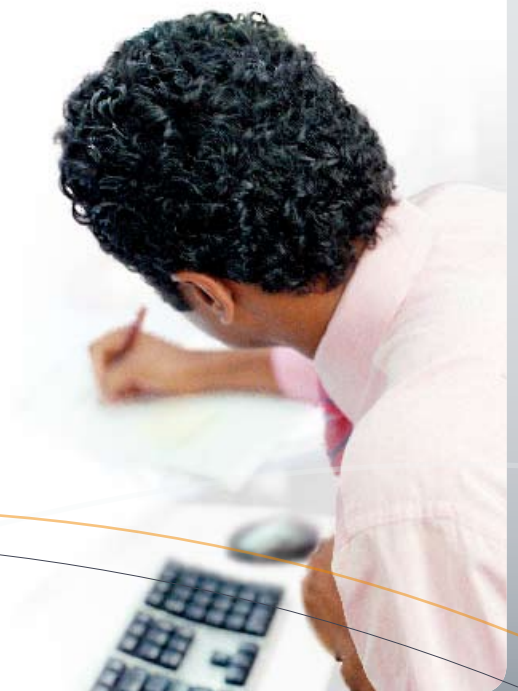

A feature of Web Forms is the automatic validation of data at time of entry. The full business rules that decide whether a form is accepted/rejected are replicated in the Web Form - contributing to a significant increase in data accuracy and reliability. Eliminating the separate downstream validation stage associated with paper forms processing adds to overall process efficiency.

EASY PROJECT MANAGEMENT

All form design projects can be accessed via a management console located at a single URL and, at the click of a button, active projects can be published or withdrawn from publication.

CUSTOMISABLE DESIGN

Web Forms is delivered with a standard HTML design template that can be easily re-styled to suit corporate or other branding.

+Web Forms

AT A GLANCE

- Design changes immediately reflected in the published Web Form
- Instantaneous retrieval of submitted data
- Fast loading web pages reduce Internet time and cost
- Comprehensive prompts and feedback encourage accurate form completion
- Robust validation at time of data entry increases data accuracy and reliability
- Console provides easy project management
- Design can be customised in line with corporate or product branding

PRE-REQUISITE SOFTWARE

Web Forms uses IIS with asp.net and will install on:

Windows XP Professional (Service Pack 1 or 2), Windows 2000 (Service Pack 2), Windows Server 2003, Windows Server 2000.

MINIMUM SPECIFICATION

Intel Pentium IV 1.4 GHz processor, 1 GB of RAM, 2 GB of available hard disk space, CD-ROM or DVD drive.
